Step 1:
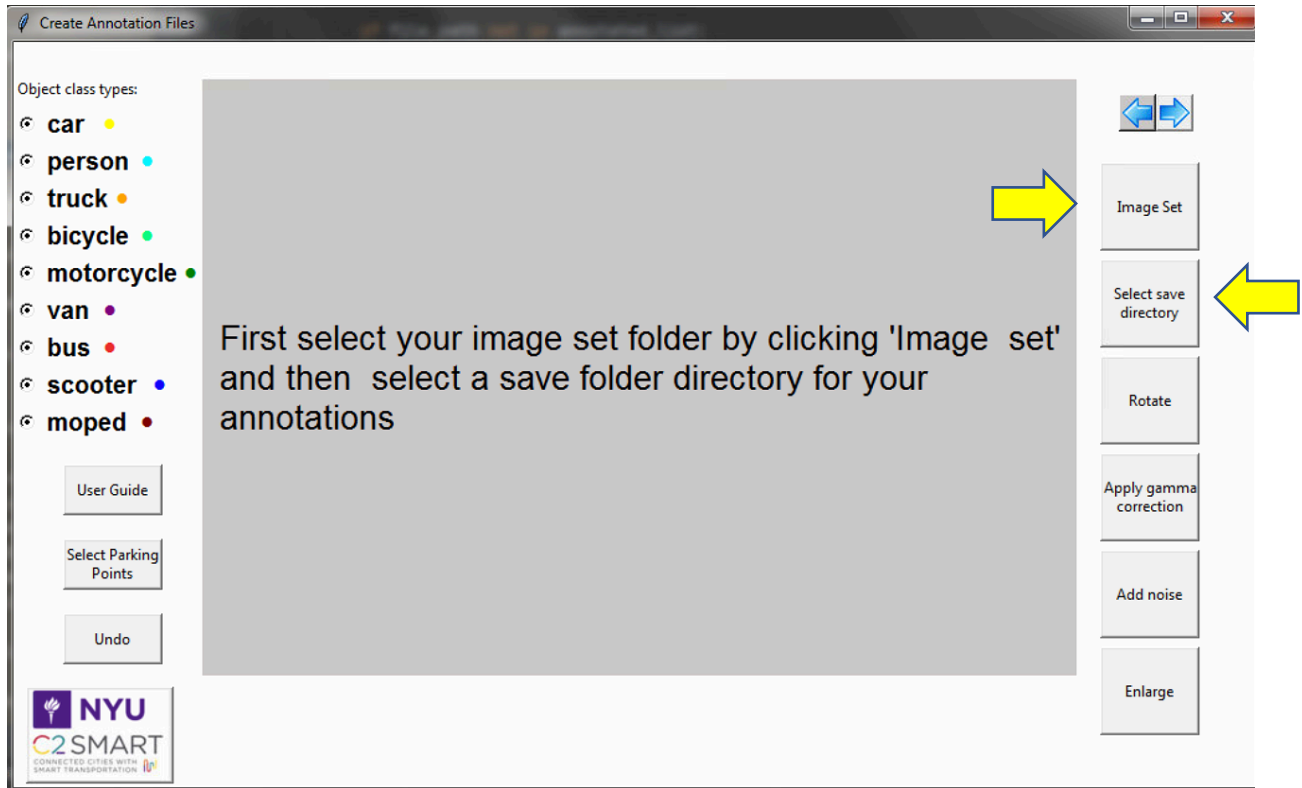

Make sure to create a folder in your computer with all the image files you would like to annotate. Also create an empty folder for the created .xml annotation files to be stored in.
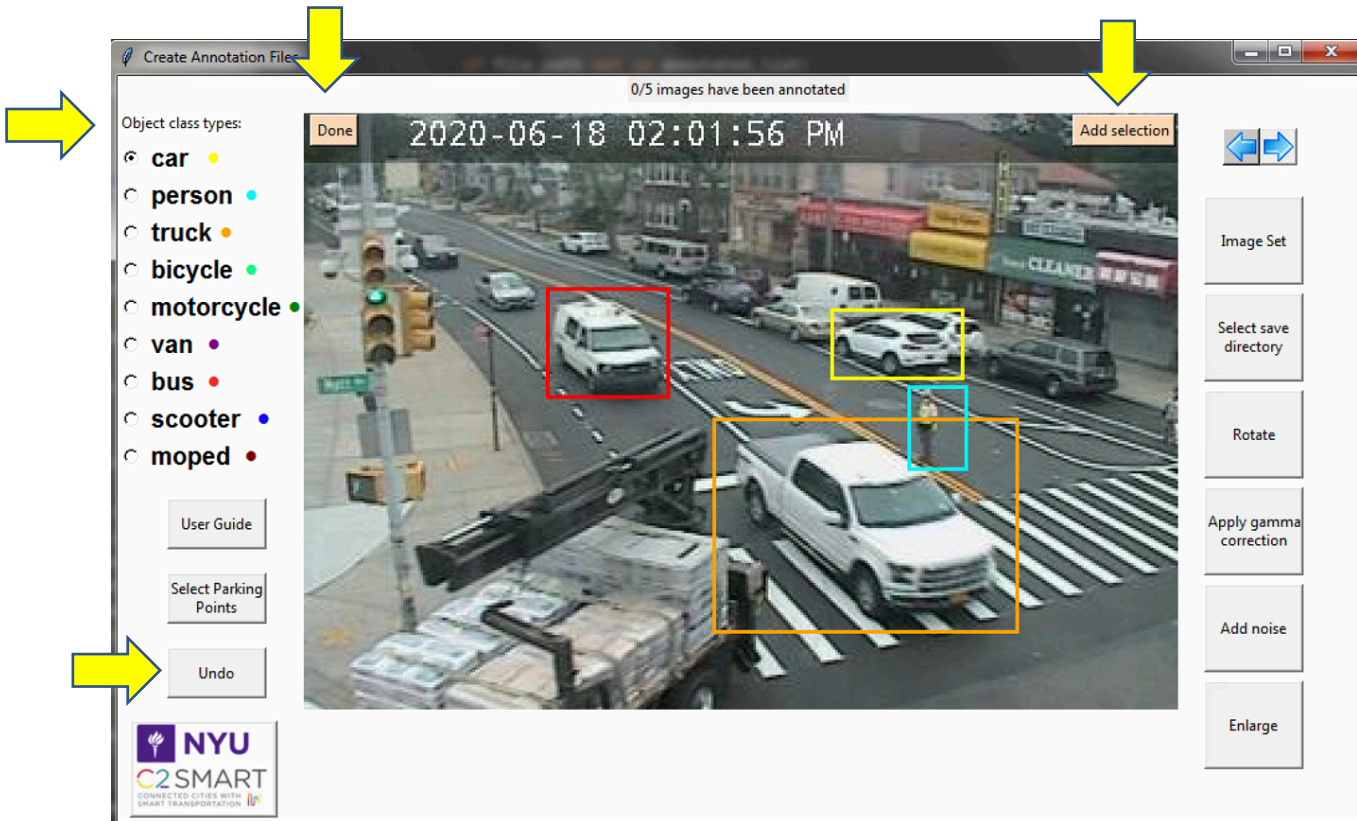

Step 2:

-Click on the "Image Set" button on the right and select your image set folder. Then click "Select save directory" and select folder you just created where you want the images to be saved in.

Warning: You're root directory (C drive) can't be selected as a save directory on the GUI.

Step 3:

-To make selection click on the point which would be the upper left corner of the bounding box you would like to create and drag it diagonally.

-After you create your bounding box select an object class type as shown on the left panel. Then click add selection. Repeat the process until you are done with all your annotations for that image.

-Once you're done making all the selections on an image, click the done button on the upper left corner of the image. After you click done your annotation file be saved in your save directory and you can move on to the next image.

-To navigate between the images, you can use the arrows keys on your keyboard or use the arrow buttons on the upper right corner.

-If you make a wrong selection use the undo button on the left panel.
